

Bizak ERP Website Privacy, Cookie, Security, and Trust Implementation Guide

For www.bizakerp.com and {TENANT}.bizakerp.com

Version 1.0 | Prepared for Bizak Systems Inc. | Draft implementation guide

Prepared By: Shiva Kafle

Important note

This guide is an implementation and content starting point, not legal advice. Have counsel review before publishing, especially before signing enterprise contracts or processing regulated financial data at scale.

1. Executive Summary

Bizak is launching an ERP SaaS product for Asian clients, hosted primarily in AWS India, using a multi-tenant architecture with customer access through {TENANT}.bizakerp.com. The platform will process financial, accounting, bill, ledger, inventory, and operational data. The public website currently positions Bizak as an enterprise ERP platform and should be updated to include a basic but credible privacy, cookie, legal, and security trust layer.

- **Recommended launch baseline:** Privacy Policy, Terms of Service, simple Cookie Policy, Security/Trust page, and footer links.
- **Cookie banner:** Not required at this stage if Bizak truly uses no analytics, advertising pixels, heatmaps, remarketing scripts, or non-essential cookies.
- **Enterprise readiness:** Prepare a lightweight DPA template soon after launch; enterprise clients may request it during procurement.
- **High-trust message:** Privacy-first ERP for Asia: no tracking cookies, India-hosted customer data, tenant isolation, no AI training on customer data.

2. Scope and Key Assumptions

Area	Current Bizak Assumption	Implementation Impact
Website	www.bizakerp.com public marketing site	Add legal/trust pages and footer links.
Product access	{TENANT}.bizakerp.com	Policies must explain tenant-specific SaaS use and logical data isolation.
Architecture	Multi-tenant SaaS	Security page must explain isolation, RBAC, audit logs, and operational controls.
Hosting	AWS India region, e.g., ap-south-1 Mumbai or ap-south-2 Hyderabad	Privacy/Security content should say India-hosted, but use exact region placeholders until finalized.
Data handled	Financial ledger, bills, accounting data, ERP transactions	Privacy and Terms must treat this as sensitive business data.
AI features	AI extraction from bills/financial ledger	Policies must explicitly state no training on customer data and define AI purpose.
Tracking tools	None	No cookie banner now; simple cookie policy is enough if only essential cookies are used.
Customer segment	Asia-focused SMB and enterprise	Trust page and DPA matter for

3. Highest-Priority Action Plan

Execution principle

The engineer should implement these items from top to bottom. Do not start with complex consent management, SOC 2 claims, or legal automation. Start with visible basics, accurate claims, and clean navigation.

Priority	Action	Owner	Acceptance Criteria	Notes
P0	Remove or soften any unverified security/compliance claims	Engineer + Founder	Site does not claim SOC 2 certified, ISO certified, or bank-grade security unless verified.	Current page text mentions SOC-2 Certified. If Bizak is not certified, change to “security-focused practices” or “SOC 2 roadmap”.
P0	Add footer legal links	Engineer	Footer includes Privacy Policy, Terms of Service, Cookie Policy, Security. Links work on desktop and mobile.	This is the fastest visible trust improvement.
P0	Publish Privacy Policy page	Engineer + Founder review	/privacy page includes website data, ERP customer data, AI processing, India hosting, data ownership, rights, contact email.	Use sample copy in this guide.
P0	Publish Terms of Service page	Engineer + Founder review	/terms page covers accounts, subscription, customer data ownership, customer responsibilities, backup/export, AI features, limits of liability.	For enterprise contracts, Terms may be replaced by signed agreement.
P0	Publish Cookie Policy page	Engineer	/cookies states only essential cookies are used and no analytics/advertising cookies are used.	No banner required if this remains true.
P1	Publish Security/Trust page	Engineer + Security reviewer	/security explains AWS India hosting, tenant isolation, encryption, RBAC, backups/export, AI safeguards, incident reporting.	This page should support sales conversations.
P1	Add privacy notice near forms	Engineer	Contact/demo forms include a short notice and link to Privacy Policy.	Example: “We use this information to respond to your request.”
P1	Create internal data request mailbox/workflow	Founder/Operations	privacy@bizakerp.com or support@bizakerp.com exists and is monitored.	Policies should not list an email that nobody checks.

P1	Create basic DPA template	Founder + counsel later	DPA available on request for enterprise clients.	Do after pages are live; not necessarily linked publicly on day one.
P2	Implement script inventory guardrail	Engineer	A simple checklist prevents adding analytics/marketing scripts without updating Cookie Policy and consent flow.	Add to deployment PR checklist.

4. Recommended Site Structure

4.1 Footer Updates

Add a “Legal & Trust” group to the footer. Current footer has Product, Resources, and Company. Add a new footer column or include these under Company if space is limited.

Footer link list

Legal & Trust
- Privacy Policy -> /privacy
- Terms of Service -> /terms
- Cookie Policy -> /cookies
- Security -> /security
- Contact -> /contact

4.2 Top Navigation Suggestion

For launch, do not clutter the top navigation. Add “Security” under Company or Resources. Enterprise buyers will look for it, but the main nav should remain conversion-focused.

4.3 URL Slugs

Page	Recommended URL	Purpose
/privacy	https://www.bizakerp.com/privacy	Main privacy policy for website and SaaS product.
/terms	https://www.bizakerp.com/terms	Terms of Service for SaaS usage.
/cookies	https://www.bizakerp.com/cookies	Simple statement that only essential cookies are used.
/security	https://www.bizakerp.com/security	Trust/security posture page for prospects and enterprise buyers.
/dpa	Optional: https://www.bizakerp.com/dpa	Can be hidden or “available on request” until legal review.

5. Visual and Appearance Guidance for Current Bizak Website

The current Bizak site has a modern dark/blue enterprise SaaS look with strong hero cards, metrics, and module sections. The new legal and trust pages should feel consistent but simpler and more readable than the homepage.

- **Layout:** Use a clean content page layout: hero title at top, short summary, then left-aligned content with generous spacing.
- **Max width:** Use 900-1100px content width for policy pages. Avoid full-width paragraphs.
- **Background:** Use white or very light slate background for legal pages. Security page may use dark hero + light content sections.
- **Typography:** Use the same font family as the existing site. Use H1/H2/H3 hierarchy with body text around 16px and line height around 1.6.
- **Cards:** For the Security page, use soft cards matching current product cards: Encryption, Tenant Isolation, Backups, AI Safeguards.
- **Tables:** Avoid complex legal tables on mobile. Use simple cards or responsive tables.
- **CTA:** At the bottom of Security page, add “Have security questions? Contact us” linking to Contact page.

6. Privacy Policy Page Implementation

6.1 Page Structure

1. Hero: Privacy Policy
2. Last updated date
3. Short summary in plain English
4. Who we are
5. Information we collect
6. How we use information
7. Customer ERP data and data roles
8. AI-powered features
9. Data hosting and international access
10. Data sharing and subprocessors
11. Security safeguards
12. Data retention, backup, and export
13. Your rights and requests
14. Contact information

6.2 Sample Privacy Policy Content

Privacy Policy - draft content

Privacy Policy

Last updated: [Month Day, Year]

Bizak Systems Inc. (“Bizak,” “we,” “our,” or “us”) provides enterprise resource planning software and related services through the Bizak ERP platform. This Privacy Policy explains how we collect, use, store, and protect information when visitors use www.bizakerp.com and when customers use the Bizak ERP platform, including tenant-specific domains such as {TENANT}.bizakerp.com.

This Privacy Policy is intended to be simple and transparent. It should be reviewed by legal counsel before publication.

Who we are

Bizak Systems Inc. provides ERP software for finance, accounting, inventory, purchasing, sales, and business operations.

Legal entity: [Bizak Systems Inc. / Insert full legal entity name]

Registered address: [Insert address]

Privacy contact: privacy@bizakerp.com

Information we collect

We may collect the following information:

1. Website and contact information

- Name, business email, phone number, company name, and message content submitted through contact, demo, or support forms.
- Basic technical logs such as IP address, browser type, device type, timestamps, and pages requested.

2. Customer ERP data

When customers use the Bizak ERP platform, they may upload or create business data such as accounting records, financial ledgers, bills, invoices, purchase records, inventory records, customer/vendor information, and operational data.

3. Account and usage information

We may process account information such as user name, business email, role, tenant, authentication logs, and activity logs required to operate and secure the platform.

How we use information

We use information for the following purposes:

- To respond to contact, demo, and sales requests.
- To provide, operate, secure, and improve the Bizak ERP platform.
- To authenticate users and manage tenant-specific access.
- To maintain audit logs, troubleshoot issues, and protect the platform from misuse.
- To provide backup, export, support, and customer service functions.
- To comply with applicable legal, contractual, and security obligations.

Customer data ownership and roles

Customers retain ownership of all business data submitted to or stored in the Bizak ERP platform.

For customer ERP data, the customer determines what data is entered into the platform and how it is used for its business operations. Bizak processes such data only to provide the ERP service, support the customer, maintain security, and fulfill contractual obligations.

Where applicable, the customer acts as the data controller or data fiduciary for its business data, and Bizak acts as a service provider, processor, or data processor.

Multi-tenant platform and tenant access

Bizak provides tenant-specific access through subdomains such as {TENANT}.bizakerp.com. Each customer tenant is logically separated from other customer tenants through application-level access controls, tenant-aware authorization, and operational safeguards designed to prevent unauthorized cross-tenant access.

AI-powered features

Bizak may use AI-powered features to help extract, classify, or process information from bills, financial ledgers, invoices, and related business records.

Bizak uses customer data for these AI-powered features only to provide the requested service to the customer. Bizak does not sell customer data. Bizak does not use customer ERP data to train general-purpose AI models. If third-party AI providers are introduced in the future, Bizak will update this Privacy Policy and related customer agreements as required.

Data hosting and location

Bizak currently hosts customer data in AWS data centers located in India.

Primary AWS region: [Insert exact AWS region, for example Asia Pacific (Mumbai) ap-south-1 or Asia Pacific (Hyderabad) ap-south-2]

Backup/DR region, if applicable: [Insert region or “Not applicable at launch”]

Authorized Bizak personnel may access customer data from other locations only when required to provide support, security, or operational services, and only under access control and confidentiality requirements.

Subprocessors and service providers

Bizak may use trusted service providers to operate the platform. Current core subprocessors include:

- Amazon Web Services (AWS): cloud infrastructure, hosting, storage, networking, logging, and related cloud services.

Bizak will maintain reasonable controls over subprocessors and will update customers if material subprocessors are added for production customer data.

Security safeguards

Bizak uses technical and organizational safeguards designed to protect customer data, including:

- Encryption in transit using TLS.
- Encryption at rest where supported by the underlying storage service.
- Role-based access controls.
- Tenant-aware authorization controls.
- Logging and monitoring for security and operational events.
- Backup and recovery procedures.
- Restricted administrative access based on business need.

Retention, backup, and export

Customer data is retained for the duration of the customer relationship unless otherwise agreed. Bizak supports data backup and export capabilities. After termination, customer data may be retained for a limited period for backup, legal, audit, or dispute purposes and then deleted or de-identified according to Bizak's retention procedures.

Retention period after termination: [Insert number of days, e.g., 30/60/90 days]

Rights and requests

Depending on applicable law, individuals may request access, correction, deletion, or other actions related to personal data. Customers should submit requests related to their internal users or business records through their tenant administrator where possible.

Privacy requests may be sent to: privacy@bizakerp.com

7. Terms of Service Page Implementation

7.1 Terms Page Structure

15. Introduction
16. Eligibility and account registration
17. Tenant access and authorized users
18. Customer responsibilities
19. Customer data ownership
20. AI-powered features
21. Backup and export
22. Subscriptions, fees, and payment terms
23. Acceptable use
24. Service availability and changes
25. Confidentiality
26. Termination
27. Disclaimers
28. Limitation of liability
29. Governing law and disputes
30. Contact

7.2 Sample Terms of Service Content

Terms introduction

Terms of Service
Last updated: [Month Day, Year]

These Terms of Service ("Terms") govern access to and use of the Bizak ERP platform and related services provided by [Bizak legal entity name]. By using Bizak, the customer agrees to these Terms unless the customer has entered into a separate written agreement with Bizak.

Tenant access and authorized users

Customers may access the Bizak ERP platform through tenant-specific domains such as {TENANT}.bizakerp.com. Customers are responsible for managing authorized users, assigning appropriate roles, and ensuring that user credentials are protected.

Customer responsibilities

Customers are responsible for:

- The accuracy, quality, and legality of data entered into the platform.
- Obtaining any required permissions or notices for personal data they enter into Bizak.
- Managing internal user access and removing access when users no longer require it.

- Reviewing outputs, reports, accounting entries, and AI-assisted extraction results before relying on them for business, tax, financial, or legal purposes.

Customer data ownership

Customers retain all rights and ownership in their business data. Bizak receives only the limited rights necessary to host, process, transmit, back up, secure, support, and provide the Bizak ERP service.

AI-assisted features

Bizak may provide AI-assisted extraction, classification, or processing features. AI-assisted outputs may contain errors or require human review. Customers are responsible for reviewing and validating AI-assisted outputs before using them for accounting, financial reporting, compliance, or business decisions.

Bizak does not use customer ERP data to train general-purpose AI models.

Backup and export

Bizak may provide backup and export capabilities to help customers retrieve their data. Customers are responsible for maintaining their own copies of exported data if required by their internal policies, tax rules, audit requirements, or regulatory obligations.

Service availability

Bizak aims to provide a reliable ERP platform, but does not guarantee uninterrupted or error-free service unless a separate written service level agreement applies. Bizak may perform maintenance, updates, or emergency changes when reasonably necessary.

Limitation of liability

To the maximum extent permitted by applicable law, Bizak will not be liable for indirect, incidental, special, consequential, exemplary, or punitive damages, including lost profits, lost revenue, lost data, business interruption, or financial loss arising from use of the service.

This clause should be reviewed by legal counsel and adjusted for the governing law and customer contract model.

Termination and data return

Upon termination, the customer should export required data before access ends. Bizak may retain customer data for a limited period after termination to support backup, legal, audit, or dispute requirements.

Post-termination data access period: [Insert period, e.g., 30 days]

Post-termination deletion period: [Insert period, e.g., 60 or 90 days]

8. Cookie Policy and Consent Implementation

Decision for current Bizak site

Because Bizak currently uses no tracking tools, analytics, advertising pixels, heatmaps, or marketing cookies, Bizak can launch without a cookie consent banner. However, this remains true only if non-essential scripts are not added later.

8.1 Cookie Page Structure

31. What cookies are
32. Cookies Bizak uses
33. Cookies Bizak does not use
34. How users can control cookies
35. Changes to this policy
36. Contact

Cookie Policy - sample content

Cookie Policy

Last updated: [Month Day, Year]

Bizak uses only essential cookies and similar technologies required for authentication, security, session management, and core platform functionality.

Bizak does not use cookies for advertising, remarketing, behavioral tracking, or third-party analytics at this time.

If Bizak introduces analytics, marketing, or other non-essential cookies in the future, we will update this Cookie Policy and implement consent controls where required.

8.2 Engineer Guardrail

Add this to engineering deployment checklist

Before adding any third-party script, confirm whether it introduces non-essential cookies or tracking. Examples include Google Analytics, Google Tag Manager, Meta Pixel, LinkedIn Insight Tag, Hotjar, Clarity, HubSpot tracking, Intercom tracking, or similar tools.

If yes, update Cookie Policy and implement consent controls before deployment.

9. Security / Trust Page Implementation

9.1 Page Positioning

The Security page should be written for prospects, enterprise procurement teams, and technical evaluators. It should be accurate, confident, and conservative. Do not overclaim certifications. If a control is planned but not implemented, label it as roadmap or omit it.

9.2 Page Structure

37. Hero: Security and Trust at Bizak
38. Short trust statement
39. Infrastructure and data residency
40. Tenant isolation
41. Encryption and data protection
42. Access control and audit logging
43. Backups and export
44. AI data protection
45. Incident response contact
46. Compliance roadmap
47. Security questions CTA

Security page hero

Security and Trust at Bizak

Bizak is designed to help businesses manage critical ERP operations with privacy, security, and reliability in mind. Our platform is hosted in AWS India and built with tenant-aware access controls, encryption, backup capabilities, and operational safeguards for financial and accounting data.

Infrastructure and data residency

Bizak hosts customer production data in AWS data centers located in India.

Primary region: [Insert AWS region]

Backup/DR region: [Insert if applicable]

This architecture supports data residency expectations for Asia-focused customers while allowing Bizak to scale securely as customer demand grows.

Tenant isolation

Bizak is a multi-tenant SaaS platform. Each customer receives tenant-specific access through {TENANT}.bizakerp.com. Customer

data is logically separated and protected through tenant-aware authorization checks, role-based access controls, and operational safeguards designed to prevent unauthorized cross-tenant access.

Encryption and access controls

Bizak protects data using encryption in transit, encryption at rest where supported by platform storage services, role-based access controls, restricted administrative access, and security monitoring. Access to production systems is limited to authorized personnel with a business need.

AI data protection

Bizak may use AI-assisted features to extract or process information from ledgers, bills, invoices, and related records. Customer ERP data is used only to provide the requested Bizak service and is not used to train general-purpose AI models.

Compliance language - safe version

Bizak follows security practices aligned with enterprise SaaS expectations and is building toward a mature compliance program.

Current status: [Insert: Internal security controls / ISO 27001 roadmap / SOC 2 roadmap / No formal certification yet]

Do not claim SOC 2, ISO 27001, PCI DSS, or other certifications unless formally completed and approved for public use.

10. Lightweight DPA Guidance for Enterprise Clients

A Data Processing Agreement does not need to be publicly linked on day one, but Bizak should prepare a basic version for enterprise requests. For early launch, publish “DPA available on request” on the Security or Privacy page after legal review.

10.1 DPA Sections to Prepare

- Parties and agreement scope
- Subject matter and duration of processing
- Nature and purpose of processing
- Types of customer data processed
- Categories of users/data subjects
- Bizak security measures
- Subprocessors, including AWS
- Breach notification process
- Return/deletion of customer data
- Audit and compliance cooperation
- International access/transfer language

11. Technical Implementation Checklist for One Engineer

11.1 Frontend Tasks

48. Create four new routes/pages: /privacy, /terms, /cookies, /security.
49. Create a reusable LegalPageLayout component with max-width content, last updated date, and section headings.
50. Create a TrustCard component for Security page control cards.
51. Add footer Legal & Trust links on desktop and mobile.
52. Add Privacy Policy link and short notice below demo/contact forms.
53. Verify pages are mobile responsive and readable.
54. Add canonical metadata titles and descriptions for each page.
55. Add noindex only if legal counsel requests it; generally these pages can be indexed.

11.2 Backend / Platform Tasks

56. Confirm exact AWS production region and update all placeholders.
57. Confirm whether backups remain in the same India region or use a second India region.
58. Confirm all authentication/session cookies are essential and documented.
59. Inventory third-party services used in production: AWS, email provider, AI provider, support tool, logging tool.
60. Confirm AI pipeline does not train on customer ERP data.
61. Confirm tenant isolation mechanism and document it internally.
62. Confirm export/backup process and retention after termination.
63. Create privacy@bizakerp.com or define support mailbox for privacy/security requests.

11.3 Content QA Checklist

- No unverified certification claims.
- No mention of regions not actually used.
- No promise of 100% uptime unless supported by SLA.
- No claim that data is never accessed by humans if support/admin access exists.
- No claim of “bank-grade” security unless defined and approved.
- AI language clearly says no training on customer data.
- Cookie Policy matches actual deployed scripts.

12. Suggested Copy for Website Microcopy

Placement	Suggested Copy	Notes
Demo/contact form	By submitting this form, you agree that Bizak may use your information to respond to your request. See our Privacy Policy.	Place under submit button.
Security page CTA	Have security or data protection questions? Contact our team.	Link to /contact.
Homepage trust strip	India-hosted ERP. No tracking cookies. Customer data is not used to train AI models.	Use only if all remain true.
Footer legal note	© [Year] Bizak Systems Inc. All rights reserved.	Update current footer year if needed.
AI feature tooltip	AI-assisted extraction should be reviewed before posting to accounting records.	Good inside app later.

13. Compliance Notes for Asia-Focused Launch

This guide does not attempt to fully implement every country-specific data protection requirement across Asia. Instead, it creates a reasonable baseline: transparency, purpose limitation, data ownership, data protection, contact path, and conservative cookie handling.

- **India:** The Digital Personal Data Protection Act, 2023 focuses on lawful processing of digital personal data and individual protection. Bizak should publish clear privacy notices and handle requests through a monitored contact path.
- **Singapore:** The PDPA framework emphasizes accountability, notification, consent, and purpose limitation. Bizak’s privacy notice and form-level notices should support these principles.
- **Enterprise customers:** Many enterprise customers will require security questionnaires, DPA review, subprocessors list, data residency explanation, and incident notification commitments.

- **Financial data:** Financial/accounting data should be treated as highly sensitive business data even when it is not always personal data.

14. Final Pre-Launch Review Checklist

Check	Required?	Owner	Status
Privacy page published and linked	Yes	Engineer	[]
Terms page published and linked	Yes	Engineer	[]
Cookie page published and linked	Yes	Engineer	[]
Security page published and linked	Yes	Engineer	[]
Footer links tested on desktop/mobile	Yes	Engineer	[]
Contact/demo form privacy notice added	Yes	Engineer	[]
No tracking scripts deployed	Yes	Engineer	[]
No unverified SOC 2/ISO claims	Yes	Founder + Engineer	[]
AWS region placeholders replaced	Yes	Engineer	[]
privacy@bizakerp.com mailbox created/monitored	Yes	Founder	[]
AI “no training” statement validated technically	Yes	Founder + Engineer	[]
DPA draft prepared for enterprise requests	Soon after launch	Founder + Counsel	[]

15. Source References Used for This Guide

These references are included for implementation context and should be reviewed during legal finalization:

- India Digital Personal Data Protection Act, 2023, Ministry of Electronics and Information Technology official PDF.
- Singapore Personal Data Protection Commission, Data Protection Obligations overview.
- Singapore Statutes Online, Personal Data Protection Act 2012.
- AWS official India local infrastructure page for AWS Regions in India.

Recommended next legal review

Before publishing final versions, replace all placeholders, confirm the legal entity name, confirm governing law, confirm AWS region/backup region, verify all subprocessors, and ask counsel to review liability, data processing, and termination language.
